

Setting Up the Development Environment

Required Software

- Java Development Kit
- Development Environment

The assignments include a Gradle bootstrapper that will download everything else.

Computing Environment

- Windows, macOS, and Linux all work
- Best to have at least 4GB RAM
 - Less may work
 - May need lighter dev environment for <4GB

Development Environment

- We will use IntelliJ IDEA for demos
 - Free 'Community Edition' works great
- Eclipse & NetBeans should work too
 - May need Gradle plugin
- Can use text editor
 - Gradle works from command line
